ADVANTAGES AND DISADVANTAGES

Is testing on animals necessary?

Some people believe that testing on animals is necessary for scientific investigations, but others are completely against because they think this isn't the right way to treat animals.

On the one hand, people who are in favour of testing argue that our health is more important than animals' life. By inoculating for example rats with a disease, we learn more about illnesses and how they affect people.

On the other hand, we try to increase our knowledge by killing animals. Furthermore, we try to prevent illnesses on humans by causing them to animals.

In conclusion, I don't think we should use animals for experiments. From my point of view, investigators should search for other methods to test their ideas.
