ADVANTAGES AND DISADVANTAGES

Is the Internet a beneficial invention nowadays?

Many people say that the Internet is one of the best inventions these days, but others feel that it has many dangers. This is a very difficult question. We must consider arguments against and in favour.

One point of view in favour is that you can find a lot of information very quickly. A further advantage is that you can communicate with your friends and family.

On the other hand, when you search for information and you find too much, you can be confused. In addition, when you meet people on the Internet and you don't see them, you don't know who are they and it is very dangerous.

In conclusion, I believe that both arguments are important, so we should be very careful when we use the Internet so we can enjoy without risk.
